

Installing iPhone Email Configuration Profile

Note: These instructions are for both iPhone and iPod Touch devices. The term "iPhone" is used throughout the document to represent BOTH devices.

1. On your iPhone, navigate to <http://www.wright.edu/cats/docs/email/iphone.html>, and touch the **Download iPhone WSU Email Configuration Profile** link.
2. You will be directed to a website to choose which options you want to install. If you are running iPhone OS 2.0 the only option available will be **Email**. If you are running at least iPhone OS 3.0, you are given the option to also install the WSU Online Directory. By default, all options are selected. If you would like to refrain from installing an option, un-check the appropriate check box. Once you are ready to install the profile, click the **Submit** button.

3. Your iPhone will download and open the profile within the Install Profile application.

4. Touch the **Install** button.

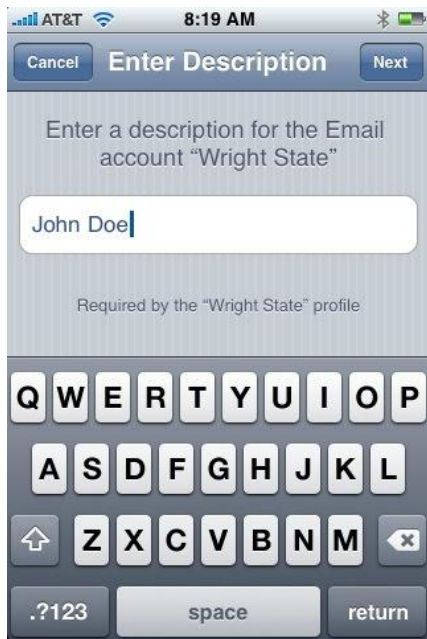

5. The iPhone will prompt you to install the profile, touch **Install Now**.

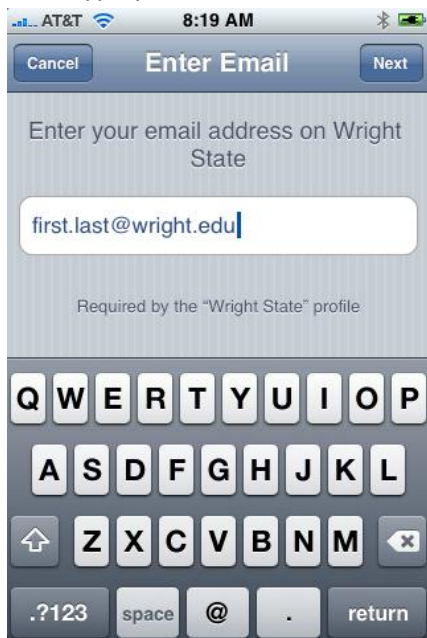

6. If you have a passcode on your iPhone, the system will prompt you to enter it.

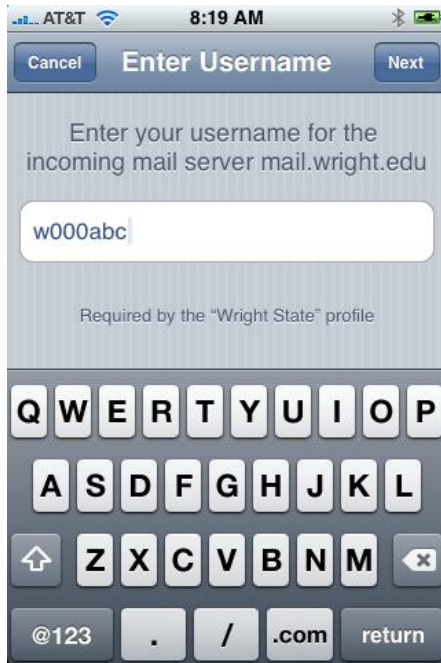

- Next, the iPhone will prompt you to enter information pertaining to your email account. First, the iPhone prompts you to enter a “description” for the account. Although this says description, you will actually type your name into this field. This name is what will appear on any outgoing messages from you.

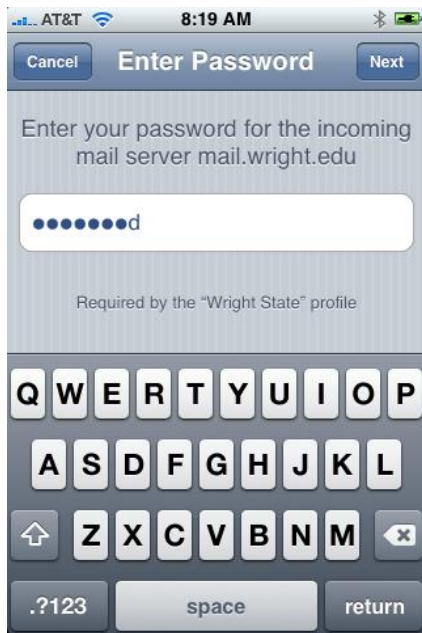

- Next, type your email address, and touch **Next**

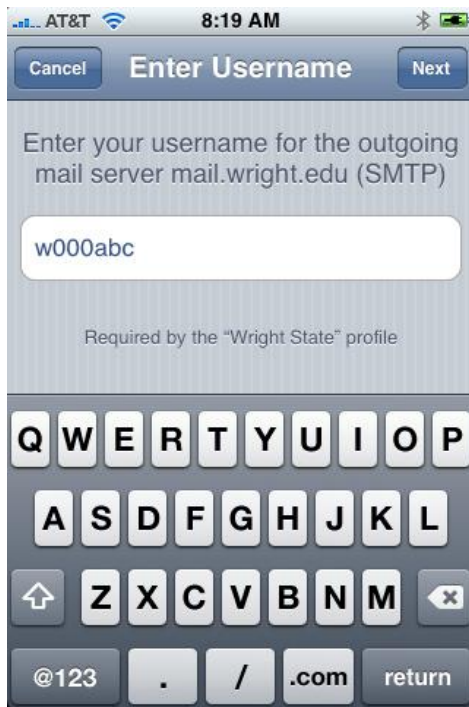

9. Next, the iPhone asks you to configure your account information for the Incoming mail server, type your CAMPUS Username (i.e., w000abc), and touch **Next**.

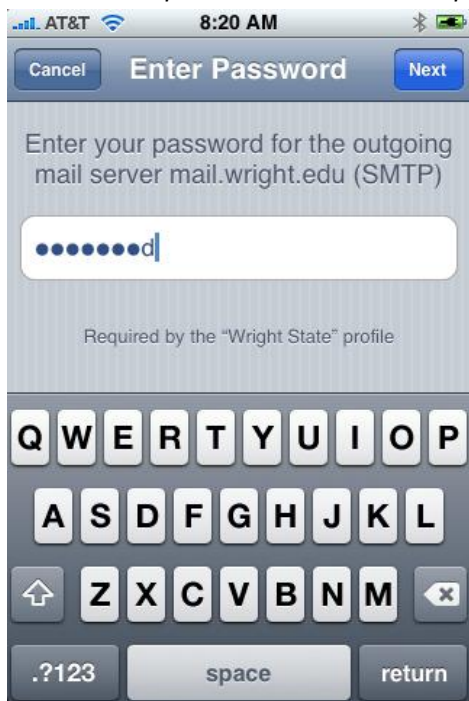

10. Next, type the password for your CAMPUS Account, and touch **Next**.

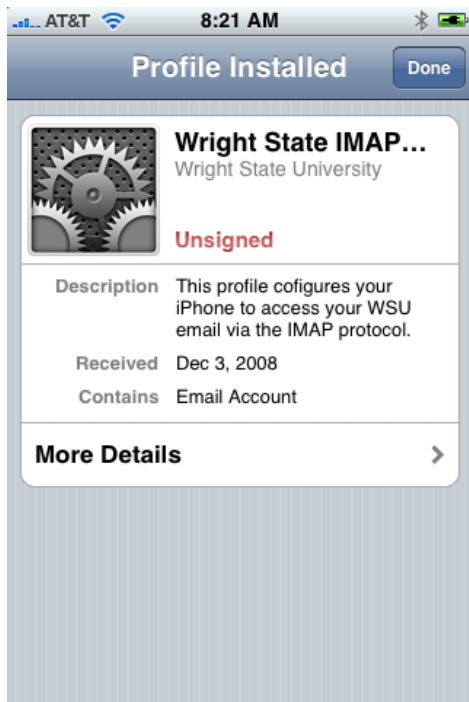

11. Now, the iPhone will ask you to configure your account information for the Outgoing mail server. Again, you will type your CAMPUS Username (i.e., w000abc), and touch **Next**.

12. Next, type the password for your CAMPUS Account, and touch **Next**.
(Note: If you are running at least iPhone OS 3.0, the configuration will use the same password entered in step 9 and will omit this step)

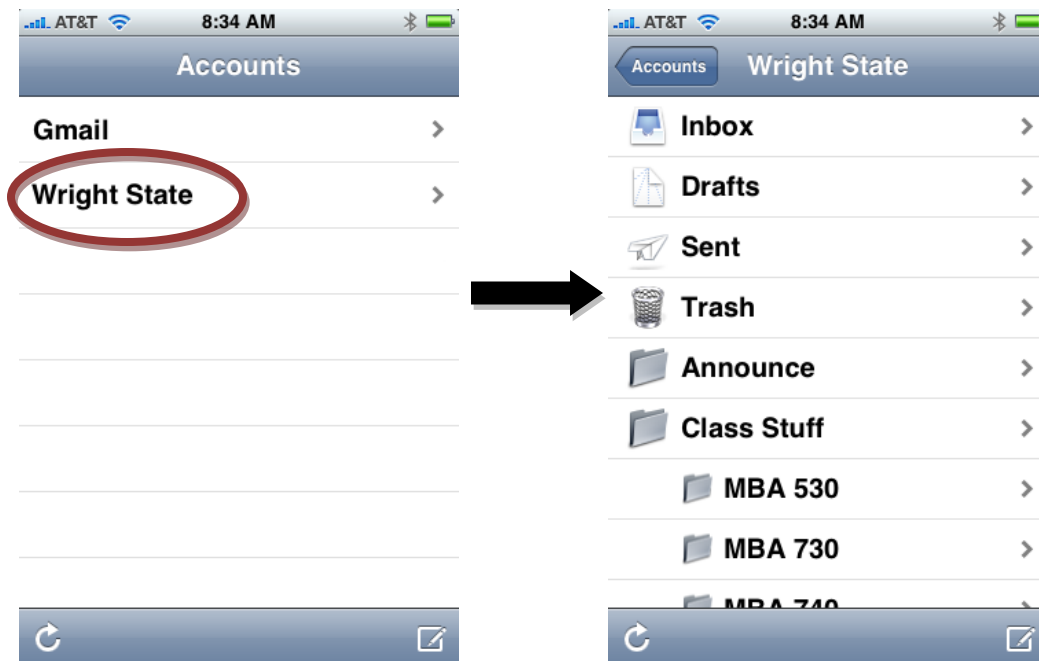

13. If the profile was successfully setup, and was able to communicate to the mail server, the iPhone will show that the profile was successfully installed. Touch **Done** to finish the process.

If the profile was not successfully configured, when prompted, touch **Try Again** to re-enter your account information.

14. Once finished, to access your WSU email, click on the Mail application. You should see your WSU account listed with the description that you entered in Step 6. Touch the account to see your mail.

WSU Online Directory (LDAP) – (iPhone 3.0 OS only)

1. If you chose to install the WSU Online Directory (LDAP), you can access it by going into your **Contacts** application. Navigate to your *Groups* listing and click on **WSU Directory**.

2. Type the name of the person you are searching for in the search box. Then click on the name of the contact that appears.

- The following screen will show any information that is available in the public directory for the selected person. From here you can call the person or send them an email by clicking on the phone number or email address, respectively.
