

Earn a Master's of Information Systems

"The IS program has provided me with additional insight into today's new technology development methods. I really value the program's focus on business results—applying and adapting technology to business. With the broad spectrum of higher-level topics covered in the IS program, I feel I will be prepared to lead any organization's IS strategy to improve business results."

—Jimmy Bowser
Managed Network Services,
Reynolds & Reynolds

Enrolling Now for July 2009

Managing IT resources to achieve business results is critical to maintaining your organization's competitive edge. Wright State's Master of Information Systems (IS) is ideally suited to professionals who have IT budgetary, managerial, or decision-making responsibilities.

Business relevance – all students complete a project that returns direct and significant value to the sponsoring organization

Curriculum based on input from industry experts:

- Technology architecture
- Project assurance and failure avoidance
- Enterprise systems
- Technology strategies
- Business continuity and disaster recovery

Flexible, one-year program

Online instruction, plus five weekend residencies

**Also enrolling for the
Master's in Supply Chain Management
for July 2009**
