Introduction

The purpose of this training guide is to familiarize users with the basic features of Cognos. It will include general information for running reports already created in the Cognos environment.

Objective

Learn to utilize basic navigation and features of Cognos to run reports based upon information previously entered into the Banner database or other data sources.

Agenda

- I. Access Cognos
- II. Access Cognos Report
- III. Run Cognos Report
- IV. Save Cognos Reports
- V. Share Cognos Reports
- VI. Schedule Running of Cognos Reports

Authors note: Reports shown in screenshots may not be publicly viewable. They are either training reports for IR staff, proof of concept demos, or used for testing purposes only.

Branding may also change over time. This can include different color schemes that feature WSU colors. All functionality should remain the same. Any functionality changes will be updated in a new version of this training document.

COGNOS OVERVIEW

Cognos Studios

Cognos is a reporting application that allows users to write and run reports by analyzing and correlating the data stored in the Banner Database or other sources.

There are generally two end-user roles at Wright State University:

Consumer - A user who is able to enter Cognos and run reports that have been prepared by another author.

Report Writer - Users who write and generate reports in Query Studio, or create and run complex reports in Report Studio.

Most of the reports you will be running as a *Consumer* were created in Report Studio.

For additional information regarding Cognos,

- Requests for additional reports submit a ServiceNow request to the Cognos Team under Access Requests “Cognos Project Request Form” at:
<https://www.wright.edu/information-technology/forms#access-requests>
- For technical assistance, contact the CaTS Help Desk at (937)775-4827

The Operational Data Store (ODS)

Cognos reports are designed using models that are built using objects from Operational Data Store (ODS). The ODS receives its data from sources such as Banner, meaning the ODS does not contain 'live' data; the data is refreshed nightly. Therefore, if a report is run in Cognos and the results do not appear right (in Banner) and the correction is made in Banner, that change will not be reflected in Cognos until the next refresh. However, if the report is directly pointing to Banner data, it will contain 'live' data.

Student Privacy, Release of Education Records, and Data Security (FERPA)

Wright State University, in accordance with FERPA, has designated the following information about a student as public information:

- A student's name
- All addresses of a student, including e-mail addresses
- Telephone listings
- Major field of study
- Number of hours registered
- Full-time or part-time status
- Class standing (freshman, sophomore, junior, senior, graduate, or professional)
- Dates of attendance
- Degrees awarded and total hours earned
- Special honors and awards
- Most recent previous educational agency or institution attended
- Participation in officially recognized activities and sports
- Weight and height of members of athletic teams

COGNOS reports containing student data beyond that listed above should **NOT** be sent out via email. Instead, reports containing private information should be sent as a link that will require the receiver to log into Cognos. Instructions on how to do this are provide further in this document.

Saving Cognos Reports containing private data should be limited to your departmental Restricted drive. If you do not have access, contact your Supervisor to request access to the R Drive from CaTS. It is good practice to save all Cognos reports to network drives (H, K, R), Reports containing private data should **NOT** be saved to OneDrive or SharePoint sites. This ensures data protection and prevention of data loss due to hardware failure or accidental deletion. See CaTS link to see what can be saved where if in doubt.

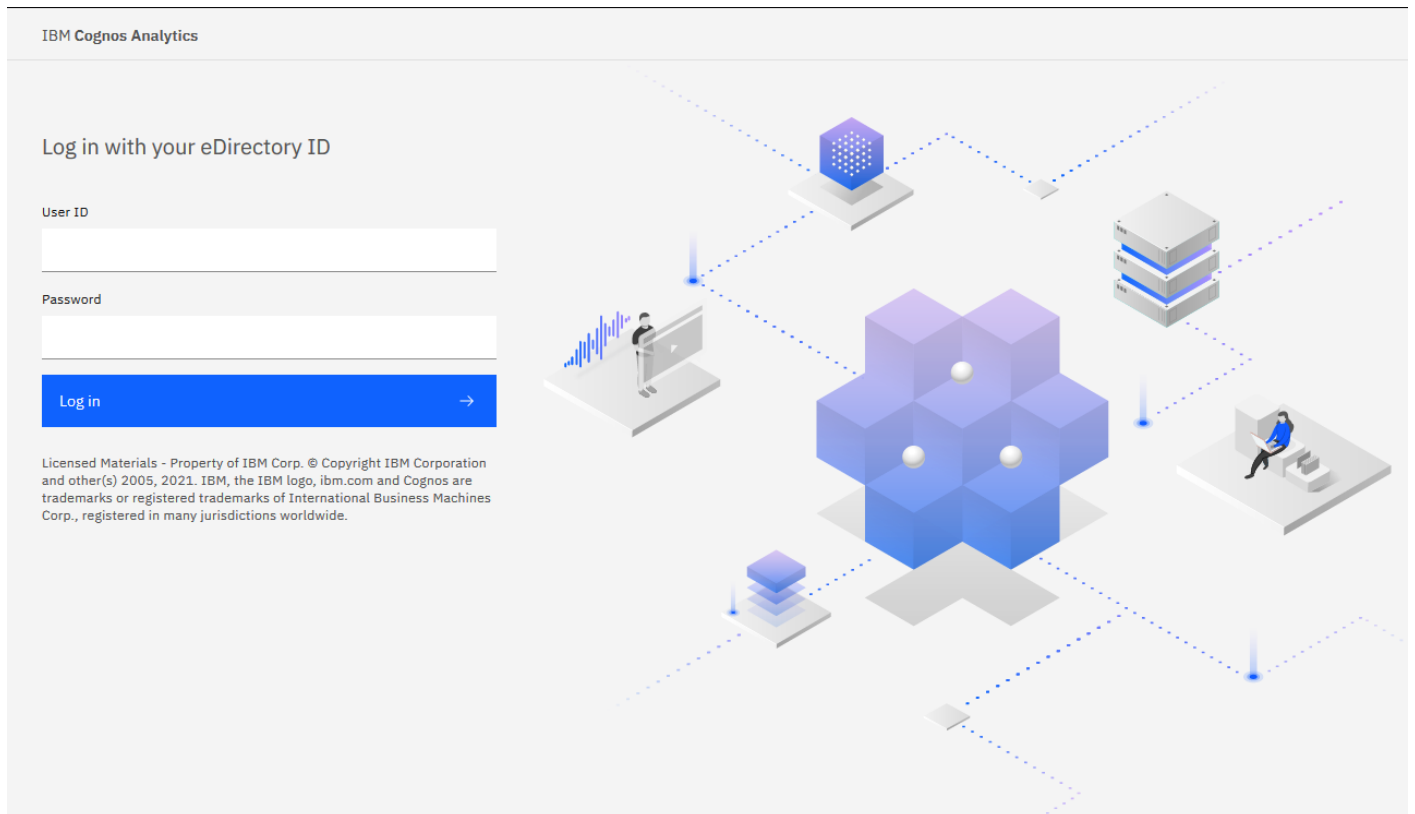

For the complete Wright State University Policy on Student Privacy and Release of Educational Records – FERPA such as the definition of an Educational Record and the Release of Educational Record without Consent, please go to: <https://policy.wright.edu/policy/3010-student-privacy-and-release-educational-records-ferpa>

ACCESSING COGNOS

Follow these steps to access Cognos:

1. Open your browser (Firefox preferably)
2. Enter the new Cognos link: <https://cognos11.wright.edu/>
3. Enter your W-ID and the password, then click on the Log In button

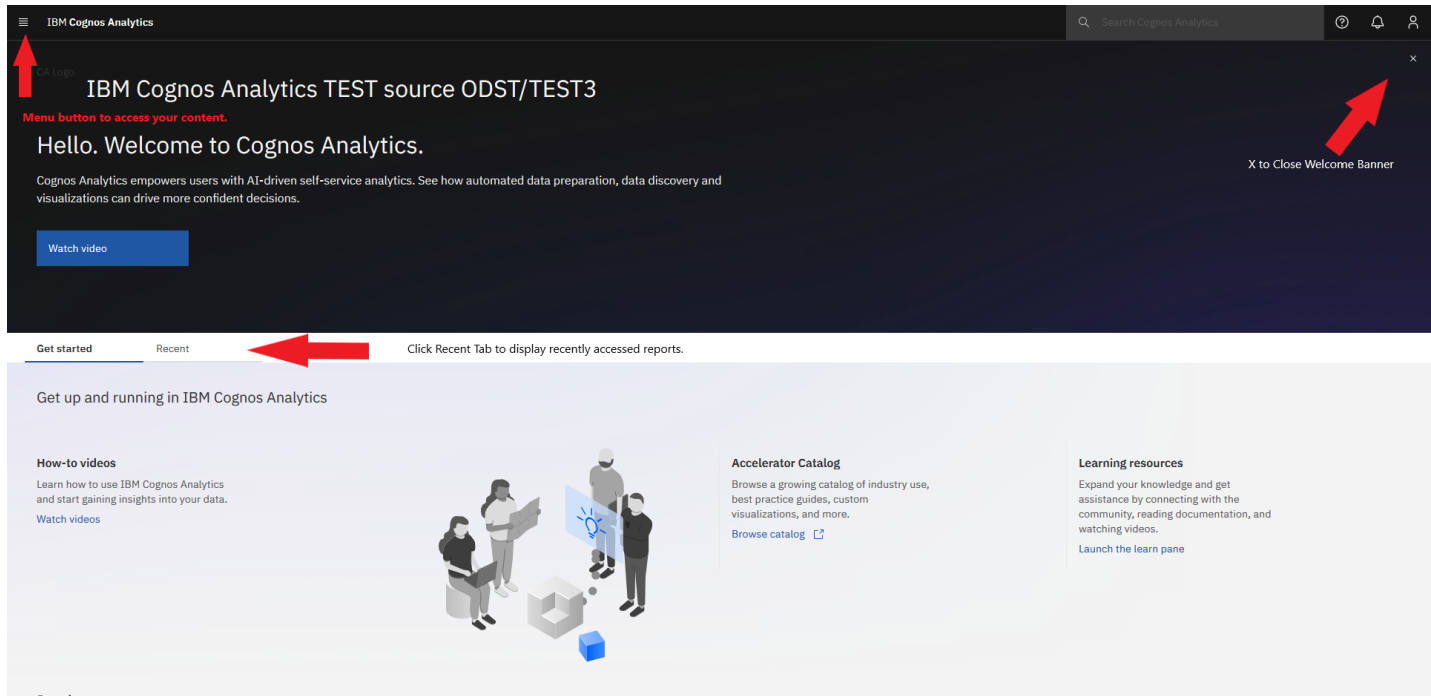

Complete list of supported browsers is available at:

<https://www.ibm.com/software/reports/compatibility/clarity-reports/report/html/prereqsForProduct?deliverableId=352864D0DB1411EA946583CF0C766A83#sw>

COGNOS WELCOME PAGE

The Cognos Welcome Page is your home page in Cognos. Your role at the university will determine your access to folders and reports.

The Welcome Page includes many features to allow for simple navigation to data in the Content Menu as well as the workspace of the application.

The Welcome Page offers quick references for How-To Videos and other learning resources. A Recent tab will display all your recently ran/accessed reports for quick access. Alternately, the Welcome Page has a Search Box in the tool bar at the top right to quickly search for reports.

ACCESSING REPORTS

Reports in Cognos can be found by browsing in the folders containing the reports, or by searching for individual reports.

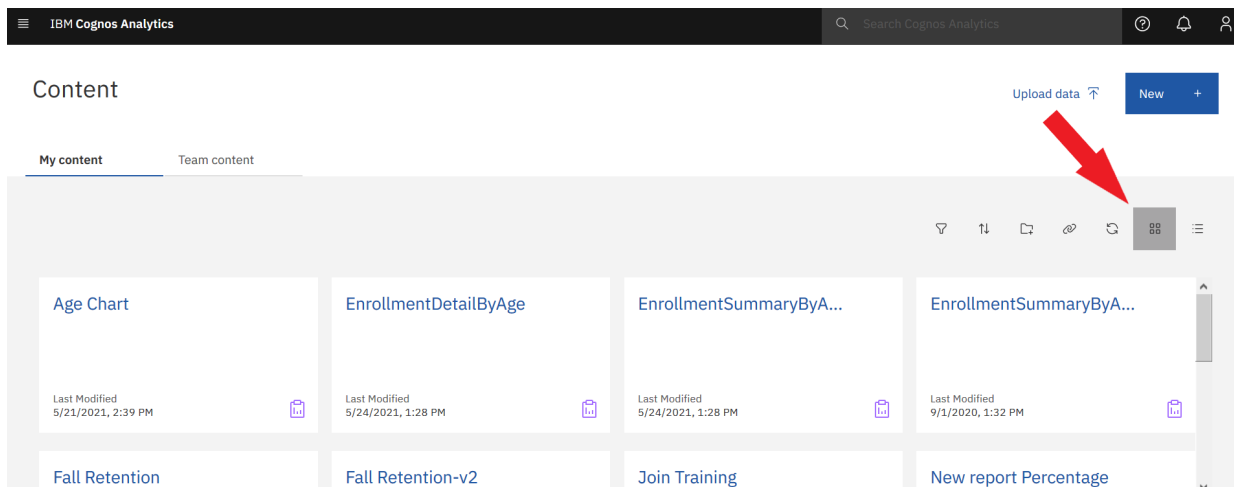

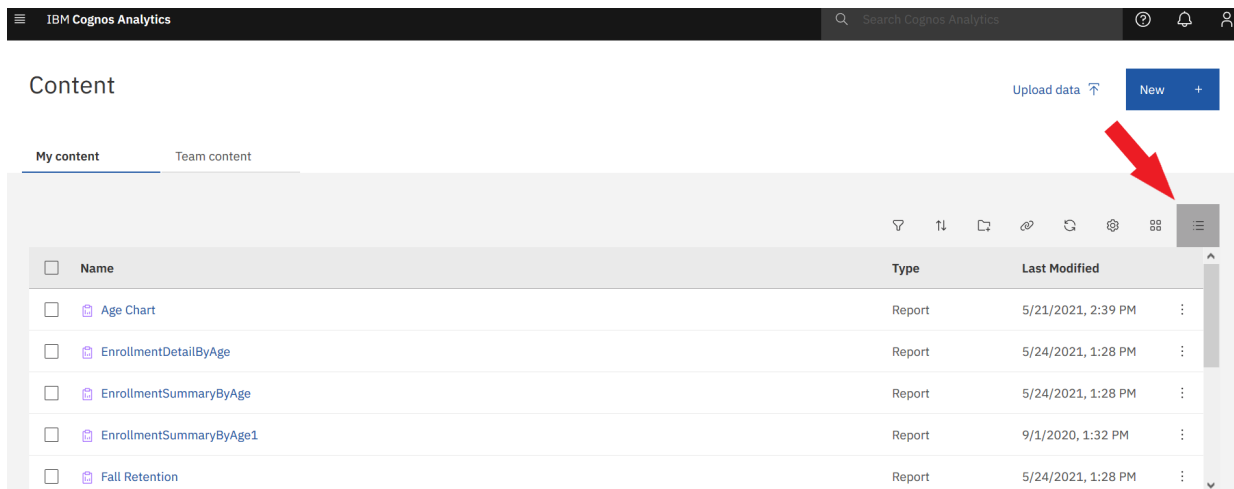

Icon notes: Cognos contains both Reports and Dashboards. Reports are denoted by  **Report** and Dashboards are denoted by  **Dashboard**

Finding Content

Views

From the Menu (hamburger icon) on the top left, reports can be accessed by clicking the Content folder and navigating to reports in either My Content (“My Folders” in previous version) or Team Content (“Public Folders” in previous version), or by selecting the Recent reports list in the Menu.

Two views are available to see content. List View of Tiles View.

Search

Cognos reports, dashboards, stories, data, files, folders, packages and other items from the My Content or Team Content folders. Search is often the quickest and easiest way to find these items.

The screenshot shows the IBM Cognos Analytics search interface. At the top, a dark header bar contains the IBM Cognos Analytics logo on the left and a search bar on the right with the text 'Spring Headcount Enrollm ...'. Below the header, a light gray banner displays 'Showing results for 'Spring Headcount Enrollment'' with 'Close' and 'Save search' buttons. The main content area shows 'Showing 4 items' with a filter icon. Below this is a table with four columns: Name, Location, Type, and Last Modified. The table lists four items: 'Spring Headcount Enrollment', 'Enrollments by Major', 'Enrollments by Major-POC', and 'Enrollment Headcount Forecast'.

<input type="checkbox"/>	Name	Location	Type	Last Modified
<input type="checkbox"/>	Spring Headcount Enrollment	Team content > Dashboards	Report	3/30/2021, 11:05 AM
<input type="checkbox"/>	Enrollments by Major	Team content > Production > Institutional...	Report	2/14/2020, 1:38 PM
<input type="checkbox"/>	Enrollments by Major-POC	Team content > Shared Institutional Resea...	Report	9/16/2018, 6:07 PM
<input type="checkbox"/>	Enrollment Headcount Forecast	Team content > Production > Institutional...	Report	1/26/2021, 9:54 AM

Items can be found by typing keywords into the Search field and tapping the Enter key. Report text items, such as table or column labels, URL items, and templates may also be found using the dynamic Search feature which will find full and partial words as entered. Search does not return results for archived content, but archived content from a report can be retrieved if the report is saved in one of the user folders.

Search Filters

If a search returns too many results, the Filter options may be used to reduce the number of items in the list. The filter option is only available once an initial search has been requested, via the Filter Icon at the top of the search panel.

The screenshot shows the search filter panel. At the top is a search bar with the text 'Filter by keywords'. Below the search bar is a 'Reset filters' link. The panel is divided into two sections: 'Type' and 'Modified'. The 'Type' section has a list of checkboxes for Folders, Dashboards, Data, Packages, Explorations, Stories, Reports, Notebooks, and Other. The 'Modified' section has a list of radio buttons for All, Today, Yesterday, Past week, and Past month.

Saving Searches

Once a search has been completed and results listed, the search may be saved for later use with the Save

Icon at the top right of the search pane.

Accessing Saved Searches

Saved searches can be found simply by clicking in the Search Box and selecting the desired saved search.

My Content Folder

The My Content folder is a personal file space to save reports and other Cognos content. Only the individual user can see the items stored in their My Content folder.

Team Content Folder

The Team Content folder, referred to in previous versions of Cognos as the Public Folder, contains information separated into business domains, to organize access to reports by user access as granted by the Office of Institutional Research and Effectiveness.

The Team Content folder is further organized by structured sub-folders. Access to folders and sub-folders is based on the security level of the user. Users are granted access to the reports based on user role and responsibilities.

RUNNING COGNOS REPORTS

Cognos reports requires users to select how the report contents are delivered based on the end-users need. Based on the default settings created by the report developer, a report can be setup to run by default in a particular format. (ex: HTML/PDF/Excel)

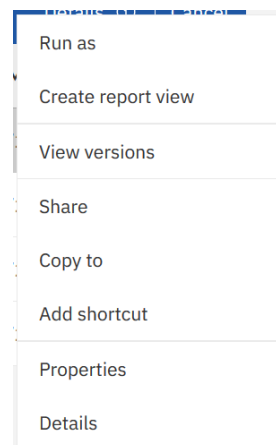

Using the Search to find the desired report, simply click on the report name. For example, to run the pictured report below, just click 'Spring Headcount Enrollment' and the report will run in your browser.

Alternatively, reports can be run in a variety of different way based on the desired output. To initiate these alternative options, right-click in the highlighted box of the report needing to be run

or left-click on the ellipsis  next to the desired report.

This option is best for users who want the report data in Excel or PDF form. It is also a way to schedule a report to run at a later date. That will be covered in another section.

*Note:

- Menu options and functionality may differ based on user permissions.
- Running a report to Excel or PDF may take longer to process than running the report in the browser (HTML). The delay depends on the report size.

Run As pop-up options

- **Run in Background** allows for advanced report options like running the report at a future date or delivering the output in multiple formats (e.g., HTML, Excel, and PDF at the same time).
- **Format** – run reports in the browser (HTML), PDF, Excel, CSV, or XML depending on your need.
- **Prompt me** – displays filtering options, if available, to create a more drilled down report.

- Points to missing information.

Academic Period Desc

Provide a value:

- * Academic Period Desc

AgeBin

Provide a value:

- * AgeBin

Inside the report (HTML)

If you ran the report in HTML format with or without filters, the **Play** button at the top left of the report allows you to rerun the report in a different format or to reset the prompts to allow you to select different variables or see all data when the report is rerun

Also located in this area, the **Save** button allows you to save your report to the *My Content* or *Team* folders. Based on user access, you may or may not see the Edit button.

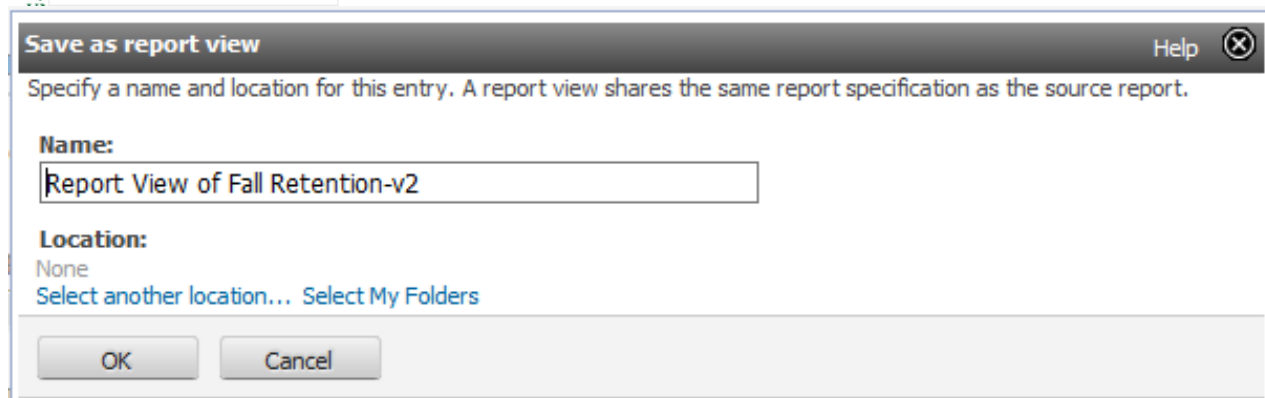

SAVING REPORTS

Cognos allows generated reports to be saved as the Report View, meaning the information is saved as of the time and date of the running. They can be used for comparison between other saved views or as easy access to a report that is updated or run often.

Saving a Copy of the Report

The **Save** button is in the top right corner of the report. Select it and choose the *Save report as report view...* option.

DO NOT change the name of the saved report. This will allow Cognos to efficiently store several versions of the same report with the same name, keeping the run dates and times as identifiers.

Cognos reports can be saved in either **another location** on the computer or in the **My Folders** area of Cognos by selecting the correct link. We recommend saving to the **My Folders** section.

Note: Please refer to the security section if saving reports outside of Cognos to ensure proper data security.

Saved report options

Saved views in the **My Content** folder can be viewed or rerun from that folder. Additional settings are available for saved versions, especially under **Properties**. These additional options are found by clicking on the ellipses or selecting Properties as indicated by the red arrows.

The screenshot shows the IBM Cognos Analytics interface. At the top, there's a header bar with 'IBM Cognos Analytics' on the left, a search bar in the center, and help, notifications, and user icons on the right. Below the header, the 'Content' section is visible. The 'My content' tab is selected, and 'Team content' is also visible. A table lists items, with 'Age Chart' selected. A red arrow points to the 'Properties' button in the top bar, and another red arrow points to the ellipsis menu for the 'Age Chart' item.

The Report and Schedule tab in Properties

The screenshot shows the 'Report View of Spr ... Hea ... Enrollment' properties dialog. The 'Report' tab is selected. The 'Report options' section is expanded, showing 'Format' set to 'Default', 'PDF options' set to 'Set', 'Enable accessibility support' set to 'Default', and 'Language' set to 'Default'. The 'Advanced' section is also expanded, showing 'Run History' set to 5, 'Report output versions' set to 1, and 'Default Portal Action' set to 'View most recent report'.

The **Report** tab offers a variety of options to adjust a saved report. Users can change values, format of the report, PDF options, change the language (not tested), and specify the number of occurrences, or report views. This is helpful when running quarterly reports. For example, setting the number to 4, the past 4 runs of the report are saved and any older reports are discarded. Setting the number to zero means users can save an unlimited number of report views and remove unnecessary reports manually when needed.

SHARING OF REPORTS

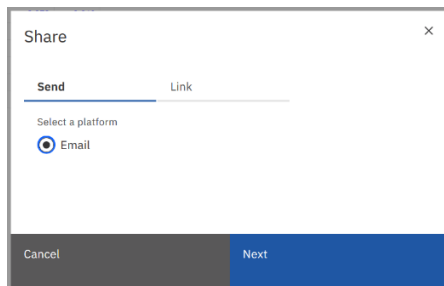

Cognos reports run in a web browser (HTML) can be shared, via email or by copying a link to the report, to other Wright State end-users with Cognos access.

Sharing via Email

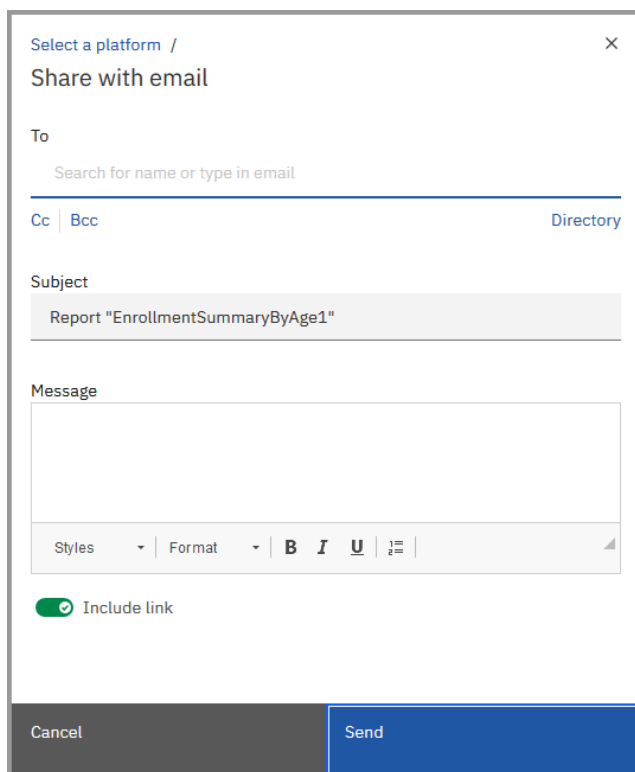

Step 1: Click on the “Share” icon located in the top left.

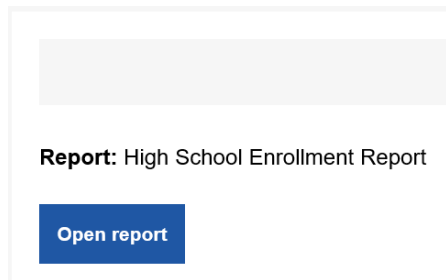

Step 2: Click on “Email” radio button and click “Next”

Step 3: Enter Wright State email addresses of those who will receive the report, a message (not required), and click the Send button.

End-users receiving the emailed report will get a message displaying the Report name along with a button they can click to open the report, for example:

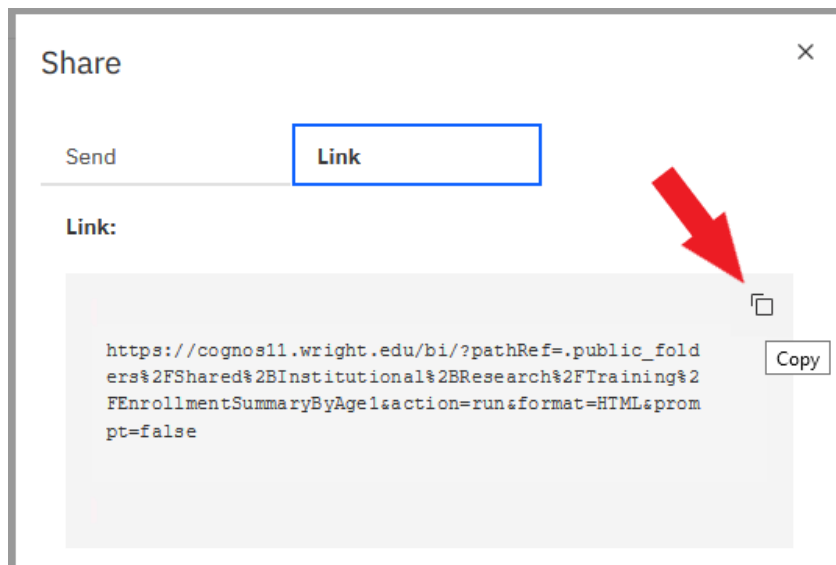

A browser window will open to the Cognos 11 sign-in page for them to login to view the report.

Sharing via Link

Alternatively, users can share a Report using a Link that can be copied to Teams, SharePoint site, Email, or other communication methods to link other users to the desired report.

To generate a link, click the 'Share' icon, then the Link tab, and click the 'Copy' button. Once the link is copied, it can then be pasted by right-clicking and selecting paste in its desired location.

SCHEDULED RUNNING OF REPORTS

From the **Properties** option, selecting the **Schedule** tab allows user to set up reports to run automatically. To get here, go to *My Contents* folder, click the *ellipsis* next to the **Report View** that was saved, select *Properties*, and then the *Schedule* tab. The tab will show *No schedules created*. Click the **Create Schedule** button.

The screenshot displays the IBM Cognos Analytics interface. At the top, the header bar includes the IBM Cognos Analytics logo, a search bar, and user icons. Below the header, the 'Content' section is visible, with tabs for 'My content' and 'Team content'. A table lists the content items, with 'Age Chart' selected. The table has columns for 'Name', 'Type', and 'Last Modified'. A red arrow points to the 'Properties' button in the table's action bar. Another red arrow points to the ellipsis menu next to the 'Age Chart' row. Below the table, the 'Age Chart' report details are shown, including the owner 'Joshua Stamper' and the creation/modification dates. The 'Schedule' tab is selected, showing a message 'No schedules created' and a 'Create schedule' button.

The **Prompts** tab allows users to define what values they'd like to see in scheduled reports. Selecting **Set Values** button will open the values prompt window for users to specify what values they want to see. By default, all values will be shown.

RUNNING REPORTS IN THE BACKGROUND

Some Cognos reports are large and may take time to run. Instead of waiting, there's an option to run a report in the background and either save the output to the My Contents Folder or send an email link to the output.

Step 1: Navigate to the report you wish to run in the background, select “More+” or the ellipsis to the far right, and select Run As.

Content

Step 2: Enable Run in Background toggle button. By default, it is in the 'Off' position.

Run as

☒ Run in background

☐ Now

☒ Later 2021-05-25  8:42 AM

☐ Prompt me

 Find

Other options in the 'Run as' window include the option to initiate the running of the report 'Now' or schedule it to run at a later time.

Prompt me allows the report to prompt for user input such as filters the end-user may use to parse down the report to more specific data points. This is optional.

Step 3: Change Format, if desired.

Format

<input checked="" type="checkbox"/> HTML Edit options	<input type="checkbox"/> PDF	<input type="checkbox"/> Excel
<input type="checkbox"/> Excel Data	<input type="checkbox"/> CSV	<input type="checkbox"/> XML

Accessibility

☐ Enable accessibility support

Format gives the end-user the option to choose the format of the output. HTML (web browser) is set as the default.

Step 4: Select delivery method.

Delivery

☒ Save

☐ Save report

☒ Save as a report view

Name

Report view of Age Chart

Location

My Folders /

Select another location

☒ Send report by email

Edit details

No recipients

☐ Send report to mobile device

☐ Print

Saving the output is required when running a report in the background.

For ease of access later:

- Select 'Save as a report view'
- Keep the default Name
- Click 'Select another location' and choose the My Content/My Folders option

At this point, the end-user can select the 'Run' button on the lower right. When the report is finished running, the output will show up in the My Content folder.

Cancel Run

Additionally, emails can be sent alerting End-Users that the ran report is ready. Continue to the next page for instructions.

To use the Send report by email option, select the check box next to it, then select 'Edit details.'

In the 'Edit details' window, enter the desired email address or addresses. End-Users can also CC or BCC other users if desired.

Change the Include Link toggle to 'On.'

Select the left-pointing arrow on the top left to return to the 'Run As' screen or select the 'Run' button to in the bottom right to run the report.

Security note: Please do not use the 'Attach report output' option, especially if the report contains private, sensitive data. Refer back to the Security section of this document if unsure.
