You turn on the tap and out comes clean, drinkable water—a simple act that most of us take for granted. Below are ways you can learn more about what’s in your water.

Learn the Facts
Wright State University operates its own public drinking water system. Every year we provide an annual report (Consumer Confidence Report) on the quality of the water being provided to you, the consumer. This is a snapshot of last year’s water quality. The report includes:

- Where your water comes from
- Potential threats to the water supply and the sources of those threats
- Information on drinking water sampling performed over the past calendar year
- How sample results compare to regulatory standards
- How to get more information

You can find the most current CCR and previous reports from previous years on our website:

Concerned about Lead in your Drinking Water on Campus?
In June, The Department of Environmental Health and Safety will begin its campus-wide lead and copper sampling. Every few years, EH&S samples over 30 taps throughout campus for lead and copper. Keep an eye out--sample results will be posted at each tap sampled. You can see information on this sampling from previous years in the CCR.

Want more information on Drinking Water in your Home?
Check with your local water provider for their CCR to get information on the water provided to your home. Additional information can be found here:
