How Can I Use Generative AI to Assess Student Understanding?

Think about your course's learning objectives: what do you want students to learn or achieve? Most educators want students to grasp concepts, think critically, analyze, and synthesize information. Assessments are created and designed to gauge those abilities yet tend to rely on the student's ability to write.

This Magna 20-Minute Mentor with Jean Mandernach, PhD, details how educators can introduce generative AI into assessments to evaluate student understanding beyond traditional reliance on written communication. Dr. Mandernach offers

several AI-integrated assessment templates and strategies to refine assessments, catering to educators' specific needs.

Upon completion of this program, you'll be able to:

- Understand how to properly assess student understanding
- Create and refine AI-integrated assessments
- Implement AI-integrated assessments into the classroom
