Physics & Math Dual (PHYM) Baccalaureate Degree

REPORT PREPARED by: Deibel, Jason A.

ACADEMIC YEAR COVERED BY THIS REPORT: [AcademicYear]

I. PROGRAM LEARNING OUTCOMES

Note This degree program is, in regard to physics content, identical to the traditional B.S. Physics degree. The Physics and Math Dual B.S. degree is available to students who seek to take additional mathematics courses beyond the already significant number of math courses already required by the B.S. degree. As the required physics content for both the Dual and B.S. degrees are the same, the learning outcomes are the same for both programs and assessment has historically assessed together. Graduates will be able to • Apply and integrate sound knowledge of several core areas of physics including mechanics, modern physics, electricity and magnetism, statistical mechanics, optics, instrumentation, and quantum mechanics (Outcome 1). • Understand and conduct research in physics at a level appropriate to an undergraduate major (Outcome 2). • Analyze and communicate research results effectively in multiple oral and written representations (Outcome 3).

II. PROCEDURES USED FOR ASSESSMENT

A. Direct Assessment

Direct measures that will be used to assess* each learning outcome a. The oral presentation of the student's mandatory senior research project (PHY 4940) will measure all three outcomes with data solicited from faculty members attending the student's presentation. In particular, these faculty will be asked how well the student met each of the three outcomes above, with possible answers very well, fairly well, not well, and cannot judge, with comments to accompany each response. b. Data solicited from faculty who mentor and teach the senior research project required of all seniors, PHY 4940, with the same questions as described above measuring Outcome 1 and Outcome 2. The student's written report and oral presentation on the project will be measures of Outcome 3. c. Data solicited from faculty teaching selected advanced undergraduate courses with the same questions listed in the first item above measuring Outcome 1. *The American
The American Physical Society (APS) is currently finalizing the Effective Practices for Physics Programs (EP3) Project. EP3 will provide a guide for self-assessment of undergraduate physics programs founded on documented best practices linked to measurable outcomes. The American Physical Society (APS) is a nonprofit membership organization working to advance and diffuse the knowledge of physics through its outstanding research journals, scientific meetings, and education, outreach, advocacy, and international activities. It had been expected that the EP3 guide would have been available by now, but its release was delayed and is now scheduled for early 2021. The Wright State University Department of Physics has delayed making any significant modifications to its assessment design and implementation until access to EP3 is possible. The WSU Physics Department is committed to developing and utilizing an assessment approach that is viewed as the gold standard, as outlined in the EP3 guide, as regarded by the national physics community.

B. Scoring of Student Work

Both quantitative and qualitative assessment of senior project (PHY 4940) oral presentations and final written reports is accomplished with a scoring rubric. This rubric is attached as a supporting document.

C. Indirect Assessment

Exit interviews with recent graduates will be used to measure all three outcomes. Every third year an alumni survey will be conducted. Assessment of the program will also be accomplished indirectly via tracking outcomes of the current academic year’s graduating seniors in regard to career trajectories.

III. ASSESSMENT RESULTS/INFORMATION:

1. Direct Assessment - There were no seniors/graduating from the Dual Physics and Math B.S. program during the 2019-20 academic year, there was no cohort for assessment. 2. Indirect Assessment - There were no seniors/graduating from the Dual Physics and Math B.S. program during the 2019-20 academic year, there was no cohort for assessment.

1. None 2. None
IV. ACTIONS TO IMPROVE STUDENT LEARNING

The Physics Department Undergraduate Studies Committee (USC) will gather, analyze and summarize all assessment data and information. Based on its findings, recommendations for improvements in meeting objectives and learning outcomes will be made by the USC and communicated to the entire faculty. Results from the prior academic year will be presented to the department in the subsequent fall annually. Every three years, an alumni survey will be conducted. Based on the outcome assessments and the alumni survey, a summary of recommendations will be compiled every three years. Per the earlier comment, upon gaining access to the APS Effective Practices for Physics Programs in early 2021, in addition to utilizing it to adopt a more comprehensive assessment plan for the department, the department will also adapt a regular and annual review process that will include analyzing and reacting to annual assessment information.

V. SUPPORTING DOCUMENTS

Additional documentation, when provided, is stored in the internal Academic Program Assessment of Student Learning SharePoint site.
