Configuring Automatic Security Updates - Mac

To configure automatic security updates on the Macintosh, follow these steps:

1. Choose **System Preferences** from the **Apple** menu.
2. Click on **Software Update**.
3. Under the **Scheduled Check** tab make sure the **Check for Updates** tab is checked.
4. Choose the frequency that you would like the system to check for updates.
5. To make sure you will receive security updates automatically, make sure the **Download important updates automatically** box is checked.
