# Demystifying Assistive Technology

# Outcomes

- Learn how some people with disabilities use technology
- Understand importance of digital accessibility
- Start using AT for testing

# Agenda

- Overview
  - Digital accessibility
  - Assistive technology
- A few use cases
- Screen reader demonstration
- Accessible gaming

# Pop Quiz

What was the first television show that had captions?

- A. Happy Days
- B. All My Children
- C. Buffy the Vampire Slayer
- D. The French Chef
- E. Masterpiece Theater

# Digital Accessibility Overview

# Scope

- One billion people worldwide
- 72% invisible/undeclared
- 56.7 million people in the US
- Open membership

# Why does this matter?

- Moral
- Business
- Legal

# Moral

- The right thing to do
- Benefits everyone
- Who we are as an inclusive community

# Business

- 91% of PwD use a smartphone or tablet
- 96% of [websites have barriers](#)
- 69% of PwD click away from inaccessible websites/apps
- Est. \$8T disposable income

# Legal

- ADA, Rehabilitation Act, Telecommunications Act, State and local laws, policies
- Lawsuits and complaints [on the rise since 2017](#)
- New laws and procedures are coming

# Types of Disabilities

# Disabilities Impacted by Technology

- Vision
- Motor
- Hearing
- Speech
- Cognitive

# Spectrum

- Permanent
- Temporary
- More than one
- From birth
- Onset later in life
- Situational

# Assistive Technology

Assistive technology (AT) is “any item, piece of equipment, software program, or product system that is used to increase, maintain, or improve the functional capabilities of persons with disabilities.”

"The 'last mile' of accessibility"<sup>1</sup>

# Assistive Tech Can Be:

- High-tech
- Low-tech
- Equipment
- Hardware
- Software
- Specialized materials

# Things That Started as AT

- Phonograph 1877
- Typewriter 1877
- Reading Machine 1976
  - Speech synthesizer
  - Optical Character Recognition (OCR)
  - Flatbed Scanner
- Captioning 1972
- Voice Recognition 2014
- Screen readers 1988
- Video calling/conferencing

# Assistive Technology on Mobile Devices

- Text Size
- Color/Color contrast
- Screen Magnification
- Screen Reader
- Text to speech
- Dictation
- Back-tap
- Auto-captions

# User Story: Motor Disabilities

- Given that I'm a person with a motor disability, when I navigate the interface of the application, then all interactive objects:
  - Receive keyboard focus
  - Have a clear focus ring
  - Are in a logical order
  - Are operable using only my keyboard or voice command
  - Don't "trap" me in an operation

# Assistive Technology for Motor Disabilities

Mouth stick

Sip and puff

Voice control

Single switchers

# User Story: Visual Disability

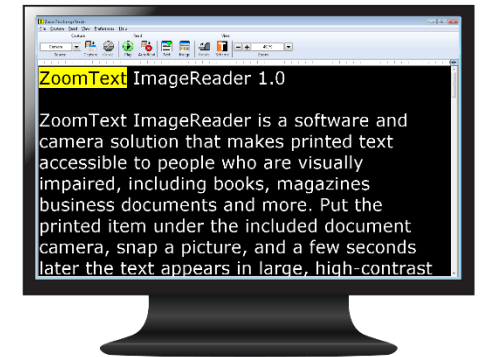

Given that I'm a person with a low vision, when I magnify the viewport of my mobile device:

- I can read text without scrolling in multiple directions
- Magnified text is not blurry
- There is sufficient color contrast between text and background
- Important elements are still available
- I am not prevented from rotating my device to landscape mode

# Assistive Technology for Visual Disabilities

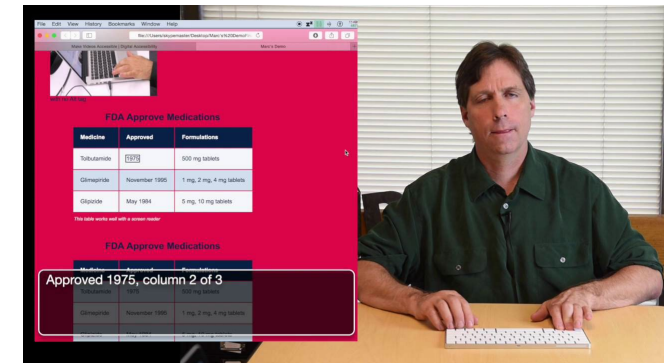

Refreshable Braille Display

Text magnifying software

Book Reader

Screen reading software

# Screen Readers

- Generally free
- Available on most operating systems
  - iOS and MacOS- Voiceover
  - Android- Talkback
  - Windows- NVDA, Narrator, Jaws (\$)

# Screen Reader Demonstration

- Docs
- Forms
- [Web Elements](#)
- Web Pages

# Prioritizing Issues

- Barriers/Blockers/Critical Issues
- High
- Medium
- Low
- No End-user Impact

What does  
“accessible”  
mean?

# Accessibility Conformance

- Process, not a destination
- Choose WCAG conformance level
  - WCAG 2.0, 2.1. or 2.2
  - A/AA (Standard)
  - AAA
- Ever expanding access
- Nothing can be fully accessible for everyone at all times
- Progress matters more than perfection
